

Senior Java Developer

Company Background

Founded in 1998 Moreover Technologies is the premier provider of real-time news and business information on the Web.

Moreover allows customers to create targeted data channels of breaking content that plug directly into any application or database, to track mentions of companies, brands, industries, trends, people, and any other topics of choice, across thousands of editorially selected news and business information sources.

Moreover has brought about a monumental shift in the nature of the distribution of news content. This shift affects the way news is delivered, used and purchased. Until Moreover, syndication rights were required to redistribute news content.

Unlike traditional content syndicators that resell proprietary information, Moreover's sophisticated technology continually scours the Internet to capture and distribute breaking news and business information from thousands of qualified, handpicked sources - including websites, weblogs and broadcast video and audio feeds.

The Role

The Senior Java Developer will be responsible for designing, developing, and maintaining applications for real-time publishing systems. You will work in an agile-based environment building creative Internet syndication products using technologies such as Java, MySQL, Javascript, Jsp, XML, Linux, and RSS. Come be a part of this team that is changing the way the Web works in a fundamental way by providing real-time Internet information and infrastructure!

Key Responsibilities

- Designing, developing, and deploying Java-based real-time publishing applications
- Providing architectural input to project-related decisions
- Be comfortable functioning as a team lead, working closely with the Engineering Manager to coordinate activities for a small team of developers
- Define systems that include both hardware and software components
- Work independently with minimum supervision and a geographically dispersed team
- Use industry best practices to deliver high quality code

Key Skills Required

- 7 years of professional software development with 5 years of Java coding experience
- Bachelor's/Master's degree in Computer Science/Engineering or equivalent experience preferred
- Self-starter with self initiative and direction
- Strong communication skills, both verbal and written
- Experience with AJAX and working knowledge of XML, RSS, or Atom
- Experience developing J2EE Web-based applications (JBoss preferred)
- Experience developing Web-based GUI applications using JSPs, Javascript, and Struts
- Experience with agile testing methodologies including test-first development and unit test automation
- Solid Linux skills including scripting expertise in languages such as Perl and UNIX shells
- Experience with JMS, Apache, and Ant
- Experience with Hibernate and Spring
- Strong mySQL design, tuning, and experience with very large databases

Training

On-the-job training

Benefits

- Medical, dental, vision, life insurance, and matching 401k (US) / pension (UK)
