

Senior Network Engineer (IT Engineer)

Company Background

Founded in 1998 Moreover Technologies is the premier provider of real-time news and business information on the Web.

Moreover allows customers to create targeted data channels of breaking content that plug directly into any application or database, to track mentions of companies, brands, industries, trends, people, and any other topics of choice, across thousands of editorially selected news and business information sources.

Moreover has brought about a monumental shift in the nature of the distribution of news content. This shift affects the way news is delivered, used and purchased. Until Moreover, syndication rights were required to redistribute news content.

Unlike traditional content syndicators that resell proprietary information, Moreover's sophisticated technology continually scours the Internet to capture and distribute breaking news and business information from thousands of qualified, handpicked sources - including websites, weblogs and broadcast video and audio feeds.

The Role

The IT Engineer has a passion for owning the environment; and we will empower you to do so. You will be primarily responsible for supporting a production network infrastructure, with a heterogeneous environment made up of Cisco and Juniper gear, Open Source Applications i.e., Linux, Redmine, Subversion, MySQL, Lucene, Nagios, Cacti, JBoss, Tomcat 5, 6, RedHat Enterprise Linux 3, 4, CentOS 4, Apache 1.3 along with and including virtualization administration (VMWare ESX). This work will include network design, configuration, maintenance and troubleshooting and will involve working with internal and external customers and vendors internationally.

Key Skills Required

- Bachelor's degree in Computer Science or equivalent experience
- Minimum of 7 years experience in a hands-on operational environment
- Extensive knowledge in router configuration and operations. (Cisco and Juniper)
- Thorough understanding of Networking and Routing Protocols
- Expertise with VLANs, VPNs, SSL and data encryption.
- Knowledge of VoIP networks and QoS principles.
- Proven ability to design and install end-user network systems, including hardware selection, software selection, and integration.
- Ability to work flexible hours, having a positive attitude, and possess strong customer service skills.
- Highly motivated, self-sufficient, and able to work well independently.
- Ability to document and communicate concepts and ideas to Executive Team
- Strong project management skills with capability to develop and manage project plans preferred

Benefits

- Medical, dental, vision, life insurance, and matching 401k
- Free on-site fitness center with a cardiovascular fitness area, weight room, daily fitness classes, and locker and shower facilities
- World-class cafeteria with a variety of daily options and specials
- Convenience store with a full-service Starbucks coffee bar, magazines, greeting cards, and an assortment of snacks
